Avik Dasgupta

Senior Android Engineer at
General Motors

August 24, 2018, Jason worked
with Avik in the same group

I worked with Jason during his time as a co-op developer in UGO. Jason was a fast learner and an avid tech enthusiast. He was an excellent developer and took responsibility for all tasks that were assigned to him. He picked up the basics of Android development very quickly with only a small amount of help from the senior devs. Jason's natural leadership skills and well-articulated presentations set him apart from his peers. He's very efficient in taking something from a conception stage to the final stages of implementation. It was a pleasure working with Jason and I'd highly recommend him as a developer and team member. [See less](#)
